

Mitsubishi Industrial Sewing Machine AC Servo

# LIMISERVO X G Series

Limiservo X G Series

# New Mitsubishi LIMISERVO Gseries!

Compact, lightweight motor with complete range of convenient functions!

### **Motor Size and Weight Reduction**

#### Realization of Compact, Lightweight Motor

Motor size reduced by approximately 60% when compared with previous motor (XL-554). Motor weight reduced by approximately 1.7kg.

## **Enhanced Functionality**

#### Step Sequence Function

- •This function enables easy programming of the desired input, output and machining operations in sequence with the stitching process. (Extensive upgrade of existing machine simple sequence mode)
- •Various operations can now be incorporated into the "stitching process", including those performed before and after operation.

Input	When sensor input When switch input When timer When stitch number When thread trim When**		ON OFF Elapses by**sec. **stitches Started Exceeds**rpm	Status	 Output	External output signal ON Motor speed adjusted to**rpm. Thread trim operation performed Needle cooler output ON Start (end) backtacking cancelled
	When motor speed	$\rightarrow$	drops below**rpm			Timer started etc.

(Note: Condition settings also possible with multiple combining.)

#### Direct Parameter No. Call-up Function

Previously it was necessary to select the respective mode to perform settings when making changes to the parameters, however, by using the G10 or G500-Y control panel, it is now possible to call up the required parameter in a single operation. It is also possible to call up parameters for each mode.

S6L. Logic switching for thread trim safety signal S6		0033
AT.	Automatic operation	0033
TL.	Thread trim prevention signal	0034

[Ex.] Checking parameter "AT" call-up

# User-Friendly Functions

#### Computer Interface Standard Equipment

- Settings data control including batch writing, reading and saving of settings can be performed using the setup software. (XCG\_SET)
- •Step sequence creation, editing, etc. can be performed using the dedicated step sequence software. (XCG\_STEP)

# **Multi-Function, Interchangeability**

#### Full Functionality

No. "33" from list.

- The G Series retains all the operability and multifunctionality of the XC-F Series! The control box uses the same connectors as the XC-F Series, enabling easy connection.
- The settings data save function has been expanded to enable saving of settings data from 1 model to 2 models.
- A parameter change difference display has been added.
   (A flashing dot (.) displays at the changed parameter.)
- 2 types of function setting can now be performed with a single input.

#### Interchangeability

The XC-KE-01P detector, XC-FM-2, XC-FM-3 (LS2-1380only), and LE-FA presser foot lifter units, and XC-CVS-2 variable speed pedal can all be used as is. The XL-554 motor can be used with an optional attachment bracket.

#### Control Panel

XC-G10 and XC-G500-Y Series control panels are available. The existing operation panel can be attached to and removed from the XC-G10 Series control panel. Significant enhancements have been made to the operability of the XC-G500-Y Series control panel over existing functionality (XC-E500-Y), and the settings data memory has been doubled

	XC-G10S (control box attachment type)		
Control panel	XC-G10L (Impossible to use it together)		
	XC-G500-Y		
A	AA-EF4: Electromagnetic type (24V)		
Auto presser foot	XC-FM-3: LS2-1380 only		
lifter unit	AA-G200-PFL-15: Air type (shared30V / 24Vuse)		
Variable speed pedal	1SP6A4: 3-speed pedal, standing machine		
Lever unit	XC-GL-1-SET: 1-step kick-back use (installation plate, extension cable set)		
(separated type)	XC-GL-2-SET: 2-step kick-back use (installation plate, extension cable set)		
	1.0m motor cable (200V): K14M52158002		
Extension cables	0.6m detector cable: K14M717324830		
	1.0m encoder cable: K14M71725402		
Installation metal	New motor and old control box: K14M72354001		
fittings	Old motor and new control box: K14M72354101
